"Cardiac Solution" Program Tip Sheet For Prior-Authorization of Cardiac Services

Provider requests for the following cardiac studies are reviewed by Magellan Healthcare's¹ ABIM certified cardiologists:

- Myocardial Perfusion Imaging (MPI)
- Coronary Computed Tomographic Angiography (CCTA)
- Prior authorization is NOT required for EKG treadmill stress testing without imaging, which may be more appropriate for certain patient subgroups, as described in the Guideline documents.

Important Data when Medical Records are Required for Prior-Authorization:

- **Symptoms** and rationale for visit with cardiologist
- Functional limitations and comorbidities (COPD, renal, stroke, chemotherapy, etc.)
- Cardiac risk factors, lipid levels when available
- Cardiac history and prior cardiac surgery/intervention
- Relevant non-cardiac history, especially respiratory history and smoking history
- **Medication,** particularly antianginal medication, respiratory medication, and anti GERD medication, with appropriate emphasis on adequate therapy for BP, angina, respiratory illness, congestive heart failure
- Vital signs, including BMI, BP, HR, respiratory rate, and pulse oximetry, and pertinent physical exam findings
- Any recent cardiac imaging tests (stress testing, echocardiogram, etc.) Actual EKG (rest and any exercise) and pertinent EKG rhythm tracing; troponin and BNP when relevant
- **Relevant non-cardiac evaluation** results: e.g. in dyspnea cases chest X-ray, d-dimer, CT scan of chest, PFTs (pulmonary function tests)
- Provider's diagnostic impressions, working diagnoses, clinical concerns

Examples of Highly Pertinent Data from the Medical Record:

MPI: 7 - 24 mSv SE: 0 mSv Chest X-Ray: 0.06 mSv Annual Background: 3 mSv (For comparison) Radiation exposure should be limited when possible.

¹National Imaging Associates, Inc. is a subsidiary of Magellan Healthcare, Inc.

^{1—}BCBSSC – Cardiac Services Tip Sheet 01.01.2020

- **Stress Testing**: Age, description of symptoms, functional limitations, cardiac history, risk factors, comorbidities (COPD, renal, stroke, chemotherapy, etc.), antianginal medication, VS and exam, EKG tracing, troponin
- **Cardiac catheterization**: Recent symptoms, antianginal medication, left ventricular function studies, and stress test results
- **Pacemaker or ICD**: Symptoms of syncope/presyncope, information on structural heart disease, EKG and rhythm data (Holter, event monitor, electrophysiologic study, tilt table testing)
- **CRT (Biventricular pacing)**: Congestive heart failure symptoms with associated NYHA functional class, heart failure medications, EKG tracing, and left ventricular ejection fraction studies
- Echocardiography: Symptoms or history suggestive of structural heart disease, particularly shortness of breath, chest pain, syncope/presyncope, thromboembolic events, prior myocardial infarction, cardiac surgery, or coronary revascularization without known left ventricular ejection fraction, prominent/loud systolic or any diastolic heart murmurs, rales, lower extremity edema, unexplained hypoxia, EKG changes, arrhythmias, radiographic evidence of congestive heart failure

Pediatric echocardiography guidelines focus on a different spectrum of cardiac pathology:

- **Congenital**: cyanosis, failure to thrive, syncope, chest pain, abnormal murmurs, prior surgery, arrhythmogenic cardiomyopathy, pulmonary hypertension
- **Acquired**: Kawasaki disease, infective endocarditis and sepsis, pericarditis, HIV myocarditis, toxic cardiomyopathy, thromboembolism, rheumatic heart disease
